Instrumentation For Eyecare Paraprofessionals (The Basic Bookshelf For Eyecare Professionals)
Synopsis

The Basic Bookshelf for Eyecare Professionals is a series that provides fundamental and advanced material with a clinical approach to clinicians and students. A special effort was made to include information needed for the certification exams in ophthalmic and optometric assisting, as well as for surgical assistants, opticians, plus low vision, and contact lens examiners. Perfect for every eyecare practice, this handy manual describes the many types of instruments used in ophthalmic and optometric offices. Over 60 different instruments are explained in detail. Each one has a general description, in addition to its use and purpose, and maintenance issues such as minor repairs and cleaning. The instruments include those used to determine visual acuity, the refractive state of the eye, the binocular status of the eye, intraocular pressure, visual field, and the health of the retina. Equipment found in the optical lab is also discussed. This helpful guide will take you through the ever-evolving dynamics of eyecare equipment and its maintenance.

Book Information

Series: The Basic Bookshelf for Eyecare Professionals
Paperback: 128 pages
Publisher: Slack Incorporated; 1st edition (December 8, 1998)
Language: English
ISBN-10: 1556423993
Product Dimensions: 7 x 0.4 x 10 inches
Shipping Weight: 7.2 ounces
Average Customer Review: 4.0 out of 5 stars  See all reviews (1 customer review)
Best Sellers Rank: #2,154,766 in Books (See Top 100 in Books)  #67 in Books > Textbooks > Medicine & Health Sciences > Reference > Instruments & Supplies  #113 in Books > Medical Books > Medicine > Reference > Instruments & Supplies  #176 in Books > Textbooks > Medicine & Health Sciences > Allied Health Services > Optometry

Customer Reviews

Yes, the book was written 9 years ago. You might wonder if it is still relevant. Remain assured that it mostly is. The instrumentation described herein has scarcely changed in decades. These are used for tasks like determining the refractive state of the eye, or to test for glaucoma. The Schiotz tonometer and other instruments reflect a mature subject. (Perhaps a somewhat sleepy field, characterised by minimal change.) If you wear glasses, you might recognise some instruments and
tests in the book's photos. Depending on your eyesight needs, you might have been subjected to various of these tests. What is perhaps missing is a discussion of some new laser-based instruments.
